

Information for Alcoa Customers

Dear Valued Alcoa Customer:

We are committed to product safety and to compliance with our obligations under REACH.

- We are happy to inform you that, in compliance with REACH, Alcoa legal entities have registered the substances of their product portfolio legally required to be registered by those legal entities by the first registration deadline (01.12.2010)

For substances required to be registered by Alcoa legal entities by the first registration deadline, registration numbers are available upon written request through your Alcoa Commercial contact. For substances required to be registered by the second or third registration deadlines (2013, 2018), pre-registration numbers are available upon written request through your Alcoa Commercial contact. Please note that many of our products (e.g., fasteners, turbine vanes, building panels, coils, plate, sheet and foil) are considered as articles under REACH. Substances in articles are not subject to the pre-registration / registration requirement.

Safety Data Sheets

We are in the process of adapting our SDS to REACH and CLP. Please note that most of Alcoa products do not require an SDS as per Article 31 of REACH; Alcoa is providing these SDSs voluntarily.

Candidate list

Alcoa is monitoring the substances on the candidate list, which will be modified periodically. Our products, except electrometallurgical pastes containing coal tar pitch, do not contain any substances currently on the candidate list as per the last update, published the 15th of December 2010 by the European Chemicals Agency.

General Alcoa REACH information can be found at
